Participant Information Sheet

Research Title	Non-technical collaborative Tangram study comparing natural view and shared external camera view
Lead Researcher	Jason Weigel, The University of Queensland
Other Researchers	Yiyang Qin, The University of Queensland
Research Team Contact	Yiyang Qin – s4919152@student.uq.edu.au
PIS Version Number	1.0

Thank you for your interest in participating in this research project. Please read the following information about the research, so that you can decide whether you would like to take part. Please feel free to ask any questions you might have about your involvement in the research.

Participation in this research is voluntary. If you do not wish to take part, you do not have to. If you decide to take part and later change your mind, you are free to stop at any time, and you would not need to give any explanation for your decision to stop participating.

If you decide to take part, you will be asked to sign a Consent Form and will be given a copy of that signed form and this Participant Information Sheet to keep. Your decision whether you take part, or not to take part, or to take part and then withdraw, will not affect your relationship with The University of Queensland.

What is the purpose of this research?
This study aims to understand how people work together on a puzzle task when they view the workspace in different ways.

In the study, two participants will work together to complete a Tangram puzzle. In one condition, participants will look directly at the puzzle on the table. In another condition, participants will view the puzzle through a shared screen showing a live camera view of the table.

We are interested in how these different viewing conditions may affect communication, cooperation, and how people understand the shared workspace.

What does participation involve?

If you agree to participate, you will work with another participant to complete a simple Tangram puzzle task.

You will complete the task under two conditions:

1. **Natural view condition:** you and your partner will look directly at the puzzle on the table.
2. **Shared screen condition:** you and your partner will view the puzzle through a screen showing a live camera view of the table.

During the activity, you may be asked to talk with your partner and work together to complete the puzzle. After the task, you may be asked a few short questions about your experience.

The whole session is expected to take approximately **20–30 minutes**. During this time for the completion of the tasks and for responding to the questions afterwards, you will be recorded by video and audio for analysis.

What are the possible benefits of taking part?
There will be no clear direct benefit to you from your participation in this research. Your participation may help the research team better understand how people collaborate when using different viewing conditions. This may inform the future design of collaborative virtual reality or shared workspace systems.

No payment or reimbursement will be provided for participating in this study.

What are the possible risks and disadvantages of taking part?
This study involves low risk. You may experience minor tiredness, mild confusion, or slight discomfort when completing the puzzle or viewing the task through a screen. If you feel uncomfortable at any time, you may pause or stop the activity.

You do not have to answer any question you do not want to answer. You may withdraw from the study at any time without giving a reason.

There is a small privacy risk because audio recordings and tabletop video recordings will be collected. This risk will be reduced by recording only the tabletop workspace, Tangram pieces, and participants' hands. No facial images will be recorded. Research data will be stored securely and accessed only by authorised research staff.

You may need to make your own way to the study location. No other costs are expected.

What will happen to the information collected from me during the research?
By signing the Consent Form you consent to UQ collecting, using and (where applicable) disclosing your information as set out in this Participant Information Statement and the Consent Form. Information obtained in connection with this project will be retained and disposed of in accordance with relevant University of Queensland policies and State and National regulations. For further information regarding the management of research data and information, you may refer to UQ's Research Data Management Policy.

Any information obtained in connection with this research project that can identify you will remain confidential. Confidentiality will be maintained by using participant codes where possible, storing consent forms separately from research data, and keeping digital files in secure UQ-approved storage. Only authorised members of the research team will have access to the data. Data will not be sent overseas for analysis.

It is anticipated that the results of this research project may be presented in student assessment work, research reports, presentations, or publications. In any presentation or publication, information will be provided in a way that does not identify you personally, unless you give express permission.

De-identified data from this study may be used again for related research, teaching, or assessment purposes, where this is permitted by the Consent Form and UQ ethics approval. Identifiable data will not be used for future research without your permission.

Any information obtained during the research project is subject to inspection (for the purpose of verifying the procedures and the data) by the relevant authorities and authorised representatives of The University of Queensland, or as required by law. Designated University individuals (data stewards or custodians) may also have access to the information for the purposes of ensuring long term retention and disposal. By signing the Consent Form, you authorise release of, or access to, this confidential information to the relevant research personnel and authorities as noted above.

Personal Information

The personal information collected for this research project includes: your name and signature on the Consent Form, your contact details if you choose to provide them, audio recordings of your conversation during the task, tabletop video recordings of the puzzle workspace and your hands, and your responses to short feedback questions. No facial images will be recorded.

Collection - Your personal information is collected for the purpose of confirming consent, conducting the study, analysing how participants communicate and coordinate during the puzzle task, and managing research records in accordance with UQ requirements.

Use – Your personal information will be used for the purpose of the research project and any other purpose described in this Participant Information Sheet and the Consent Form.

Storage and security – Your personal information will be maintained confidentially by ensuring appropriate access and security is applied to the research project data. Your personal information will be accessed by authorised research staff, authorised staff of UQ (for the purposes of managing data holdings) and third parties as described in this Participant Information Sheet and the Consent Form.

Disclosure – Your personal information will only be disclosed in a manner consistent with this Participant Information Sheet and the Consent Form. Your personal information will remain confidential and will not be disclosed to a third party without your agreement, or as required by law.

You have the right to request access to the personal information about you that is collected and stored by the research team. If you are seeking to update or correct any information, it is recommended that you liaise with the research team in the first instance (see contact details at the top of this information sheet).

You are also able to request amendment via a University of Queensland Right to Information and Privacy officer (rti@uq.edu.au). For further information regarding the management of your personal information, please refer to UQ's Research Data Management Policy, Privacy Management Policy and Privacy Management Procedure.

What will happen if I decide to withdraw?
Your participation in this research is voluntary and you are free to withdraw without needing to provide an explanation. If you withdraw from this study, here will be no penalty or disadvantage to you. No payment or incentive is provided for participation.

If you decide to withdraw, we will not collect additional data or information from you. Any data, samples and information already collected may be retained as described in this Participant Information Sheet and the Consent Form to ensure that the results of the research project can be measured properly and to comply with relevant regulations.

If you decide to withdraw, the research team will remove your identifiable data where possible. However, because the study involves paired collaboration and shared audio/video recording, it may not always be possible to remove all recorded data after the session or after analysis has begun. In this case, the research team may continue to use de-identified data already collected, as permitted by the Consent Form and ethics approval.

Can I hear about the results of this research?
If you would like to hear about the results of this research, you may contact the research team using the contact details at the top of this information sheet. Results may also be included in student assessment work. Any results will be reported in a way that does not identify you personally.

Who can I contact if I have any concerns about the project?

Questions about the nature of this project and participation in it should be directed to the research team (see top of information sheet for details).

This study has been reviewed by the coursework thesis supervisor as the study is being completed as part of the a coursework educational activity. You are free to discuss concerns regarding this study or your participation in it with the research team.
